

# THE POWER OF **ICONIC**

## **ENVIRONMENTAL POLICY**

It is the policy of Iconic Power Systems to understand and minimize the impact of our work activities on the environment. We will work with our clients in this regard, and will meet or exceed legislated requirements and community expectations, within the economic and technical constraints of a project.

### **ICONIC WILL:**

- Develop and maintain a reasonable level of understanding of the environmental issues related to our fields of expertise.
- Use appropriate specialists to complement our in-house knowledge in addressing environmental issues.
- Apply professional and responsible judgment in our environmental considerations
- Ensure environmental planning and management is integrated into all our activities that are likely to have an adverse environmental impact.
- Include the costs of environmental protection and/or remediation among the essential factors used for evaluating the life-cycle economic viability of projects for which we are responsible.
- Recognize the value of waste minimization, and endeavour to implement the elimination and/or reduction of waste at the production source.
- Cooperate with public authorities in an open manner, and strive to respond to environmental concerns in a timely manner.
- Comply with legislation, and when the benefits to society justify the costs; encourage additional environmental protection.
- Encourage our staff to work actively with others to improve environmental understanding and practices.
